MORBIDITY AND HOSPITALIZATION DATA FOR INDIVIDUAL STATIONS	24

WEEKLY HEALTH REPORT

NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, WD AGO 8-122, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports; for this and other reasons, total strength of reporting units has been consistently about 1 percent below the actual strength of the Army in this country. The mean strength shown for individual stations is that of Army personnel attached or assigned for medical care and does not include organizations not on the post but dependent on the station for hospitalization.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (!).

MORBIDITY DATA

Admissions are reported only for cases admitted to a medical installation (either to hospital or quarters) and not returned to duty within the same day, except for certain cases carded for record only (chiefly venereal disease cases treated on duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all "new" traumatisms (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, as well as various types of wounds not due to enemy action) other than battle casualties. Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. It may be noted that under the term infectious hepatitis are included cases reported as jaundice and cholangitis. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The average proportion of the daily strength of the command which is confined to hospital or quarters (mean number of non-effectives per thousand strength) is given in the summary table for the total United States and for each of the Service Commands. More significant is the estimated non-effective rate for personnel stationed in the United States shown in the chart on page 7.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

In making comparisons between Service Commands it should be borne in mind that morbidity rates naturally tend to be higher in those Service Commands which have a relatively large number of General Hospitals and Ports of Embarkation. The presence of sizeable numbers of troops not under the jurisdiction of a Service Command (e.g. casualties, task force troops, etc.) affects the interpretation of the data from the viewpoint of Command responsibility.

MORTALITY DATA

Recent studies indicate that the reporting of deaths on WD AGO 8-122 is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 10 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table. It should also be noted that reception, redistribution, and separation centers frequently report relatively large numbers of admissions arising from routine physical examinations of large bodies of troops.

EXPLANATORY MATTER

In reading the detail tables, it should be born in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (E) is placed after the name of the station.

MORBIDITY FROM ALL CAUSES INJURY ONLY

CONTINENTAL UNITED STATES

MORBIDITY FROM DISEASE ONLY COLDS, INFLUENZA, ETC.

CONTINENTAL UNITED STATES

COMMENT ON CURRENT TRENDS

MORBIDITY FROM: All Causes:

(See Chart on page 3.)

Morbidity from all causes during the week ended 7 December increased (by about 5 percent) to 609 per thousand troops per annum.

Injury:

The admission rate for injury remained at 30 per thousand troops per annum..Highest morbidity was reported from the Fourth and Eighth Service Commands, (35 per thousand), ranging upward from the low rate of 23 per thousand reported from the First Service Command.

Diseases:

(See Chart on opposite page.)

Morbidity from all diseases in the United States as a whole increased to 579 per thousand during the week (5 percent above the rate for the corresponding week of last year, but almost 40 percent below the rate during the outbreak of respiratory diseases in 1943). Increases over the previous week in the corresponding periods of 1944 and 1943 were 6 percent and 73 percent, respectively.

Disease admission rates decreased during the week in the First, Fifth, Sixth, and Seventh Service Commands (see charts on page 6); a large part of the drop in the First, however, may be due to an 8 percent increase in the strength of the service command, reflecting the arrival of large numbers of troops at the Boston PoE. Sharpest increase was noted in the Eighth Service Command (22 percent over the previous week), with increases of 9 percent and 11 percent reported from the Second and Third Service Commands, respectively.

Respiratory Diseases:

(See charts on opposite page and page 6.)

The rate for colds, influenza, etc, increased during the week in the country as a whole from 149 per thousand troops to 169, and exceeded the rate for the corresponding period last year by 40 percent. However, this year's rate is about 70 percent lower than that for the corresponding week of 1943.

Morbidity from these causes decreased in the First, Fifth, Sixth, and Seventh Service Commands. Highest morbidity was reported from the Third Service Command and the Military District of Washington (253 and 277 per thousand, respectively), ranging down to the rate of 87 reported by the First Service Command. In all Service Commands except the First and Sixth, this year's admission rates are higher than those in the corresponding period of 1944; in no service command, however, do the current week's rates approach those reported in the corresponding period of 1943.

The admission rate for all forms of primary pneumonia rose during the week from 12 to 13 per thousand troops, as compared with last year's rates of 8 and 10 per thousand troops, and rates of 18 and 15 in 1943 in the corresponding periods. The rate for primary pneumonias other than atypical moved from 3.3 to 4.0 per thousand.

Highest morbidity for all forms of primary pneumonia was reported from the Third and Fourth Service Commands and the Military District of Washington (16 per thousand).

COMMENT ON CURRENT TRENDS (CONT.)

Venereal Diseases:

Morbidity from venereal diseases (excluding EPTS cases) decreased to 53 per thousand per annum.

Morbidity from these causes decreased or remained substantially unchanged in all service commands. Highest rate was noted in the Third Service Command (79 per thousand), lowest (24 per thousand and 32 per thousand), in the MDW and the Ninth Service Command.

Other Communicable Diseases:

Morbidity from diarrhea and dysentery remained low (4 per thousand); only the First and Ninth Service Commands reported rates in excess of 5 per thousand.

NON-EFFECTIVE RATE:

(See Chart on page 8.)

The non-effective rate for personnel stationed in the continental United States is estimated at 35.5 per thousand strength for the week ended 7 December as compared with 34.1 per thousand for the corresponding week of 1944.

PATIENTS REMAINING UNDER TREATMENT: 7 DECEMBER 1945:
(See Chart on page 8.)

The number of patients remaining in hospital in the Zone of Interior, including patients transferred from overseas, decreased during the week to 180,419 as compared with 186,585 at the end of the previous week.

The number of neuropsychiatric cases remaining was 13,296 or about 800 fewer than at the end of the previous week. Non-battle injury patients remaining numbered about 31,000. The number of battle casualty patients remaining decreased by about 2700 to number 47,670.

CERTIFICATES OF DIABILITY FOR DISCHARGE:

(See Chart on page 9.)

In the week ended 7 December there were 6777 enlisted personnel discharged by CDD, (150 more than in the previous week). Fifty-four percent of these discharges were reported by general hospitals and 26 percent by convalescent hospitals. Among these CDD's were 1216 neuropsychiatric cases, about 100 less than in the previous week.

FORM 56-902-8 July 1944

RESTRICTED

WOMEN'S ARMY CORPS

During November special WAC reports were received from 50 selected stations which included most of the stations in the United States having a WAC strength of over 300. The WAC strength of 50 reporting stations was 31 percent of the total WAC strength in the continental United States.

During the five-week period ended 30 November the annual admission rate from all causes among WAC personnel at 50 selected stations decreased (by 3 percent) to 798 per annum per thousand strength. The November admission rate from all causes for the WAC was 58 percent above that for the total Army in the continental United States, reflecting the well-known fact that morbidity among women is considerably higher than among men.

Morbidity from all causes during November varied appreciably by station, reflecting in large part the relatively small numbers of personnel at most of the reporting installations. The all causes admission rates in general ranged from 500 to 2000 per thousand. Fort Bragg, N. C., Fort Huachuca, Ariz were the only stations which reported rates in excess of 2200 per thousand (2213 per thousand, and 2934 per thousand respectively).

The November admission rate from injuries for the WAC increased to 33 per thousand as compared with 31 per thousand for the total Army in the United States.

Morbidity from colds, influenza, etc, decreased from 186 per thousand in October to 181 per thousand in November which was over twice as high as the corresponding rate for the Army as a whole.

Morbidity from all forms of pneumonia was reported at 10 per thousand in November, or the same as that reported for the Army as a whole.

Morbidity from diarrhea and dysentery for the WAC was reported at 6 per thousand, which is about 50 percent higher than the November rate for the total Army.

In November neuropsychiatric disorders among the WAC accounted for an admission rate of 10 per thousand, a decrease of about 17 percent from the previous month.

The number of CDD's at the 50 selected WAC stations averaged about 10 per week during November as compared with a weekly average of about 18 during the six-month period of March through October.

WOMEN'S ARMY CORPS (CONT.)

As of 30 November there were 510 WAC patients remaining in hospital and quarters at the 50 selected stations. In addition to the 551 WAC's remaining in hospital at the selected stations there were 1001 WAC's occupying beds in general hospitals (exclusive of Tilton, Pickett, and Walter Reed, which are among the selected stations). The number of WAC's occupying beds at Station, Regional, and Convalescent Hospitals, exclusive of the 50 selected stations, was 525. Thus, the total number of WAC's occupying hospital beds as of the end of November was 2077.

The number of WAC's occupying hospital beds as of the end of November represented a rate of 31 per thousand strength of the WAC in the continental United States. For the total Army in the continental United States the corresponding figure was in the neighborhood of 32 per thousand when overseas forces were included.
